	SUPERVISORY PATENT EXAMINE TECHNOLOGY CENTER 1600		

Continuation of 11. does NOT place the application in condition for allowance because: The rejection of claims 88-96 under 35 U.S.C. § 112, first paragraph, as failing to comply with the enablement and requirement, is maintained for reasons of record in the previous office actions. Applicant argues that the amended claim 88 reciting that the second polynucleotide comprises a nucleotide sequence that is fully complementary to SEQ ID NO: 1, 5, 9, 11, 13 or 15. Applicant argues that enablement in the present case is met by the provision of the starting polynucleotide sequences and methods of hybriziding other sequences and exporessing the TGF-b binding protein, and one of skill would not require to make every single possible embodiment. Applicant's arguments have been fully considered but have not been found to be persuasive. The the claims still read on a genus, i.e. an isolated antibody or antigen binding fragment thereof which binds to a TGF-beta binding protein, or fragments, variants thereof. While the specification discloses an isolated antibody or antigen binding fragment thereof which specifically binds to a TGF-beta binding protein encoded by a polynucleotide that comprises SEQ ID Nos:1, 5, 9, 11, 13, and 15, one of skill has to evaluate any non-exemplified antibody for binding specificity.

The rejection of claims 88-96 under 35 U.S.C. § 112, first paragraph, as failing to comply with the written description requirement, is maintained for reasons of record in the previous office action. Applicant argues that the class of polynucleotides encoding TGF-b binding protien can be easily determined based on provision of SEQ ID NO: 1, 5, 9, 11, 13 or 15, and applicant needs not disclose the chemical structures that would add "unnecessary bulk" to the application. Applicant's arguments have been fully considered but have not been found to be persuasive. Without the teachings that define any structural features commonly possessed by members of the genus that distinguish them from others, one skilled in the art cannot, as one can do with a fully described genus, recognize the identity of the members of the genus. A definition by function does not suffice to define the genus because it is only an indication of what property the protein has, rather than what it is.

The rejection of claims 88-96 under the judicially created doctrine of obviousness-type double patenting over claims 1-8 of U. S. Patent No: 6,803,453, is maintained. It is noted that Applicant indicated that a terminal disclaimer will be filed upon indication of allowable subject matter in this application.
